The ADVANTAGES

of an ENERGY STAR® new home

U T A H

Advantages

of an ENERGY STAR® new home

U T A H

ENERGY STAR homes are designed, built and performance tested to be at least 15% more efficient than homes built to Utah code standards, making them some of the most energy efficient homes on the market today.

Savings

ENERGY STAR homes cost less to own and live in than code-built homes. Monthly energy bill savings typically outweigh any incremental mortgage costs for the ENERGY STAR package. These homes keep more money in your wallet month after month, making an ENERGY STAR home a good investment and a smart choice.

Enhanced comfort

Enjoy a home with even temperatures throughout – warmer in winter, cooler in summer – and free from drafts. Tightly-sealed ductwork, high-performance windows and properly installed insulation all contribute to making your home more comfortable.

Healthier indoor air

Performance-tested ductwork helps keep the air inside your home clean by reducing the possibility of drawing unwanted air from your home's attic, basement, crawl spaces, and garage.

Peace of mind

Relax knowing your home has been inspected and certified by an independent third party to meet ENERGY STAR's standards. Simplify the numerous energy efficiency choices in the new home buying process by choosing one that has earned the trusted ENERGY STAR label.

Better future

Choose a home that uses less energy, and you'll help contribute to a healthier environment and a better future for everyone.
